

Hyperion Performance Management with Datavail

datAvail

BI/Analytics • Applications • Databases

One Software Solution to Manage, Monitor, and Optimize Your Oracle Hyperion EPM Environment.

Datavail's APM platform, developed from the ground up by recent acquisition Accelatis, is the premier Oracle Hyperion Application Performance Monitoring and Infrastructure Management software application built specifically to address the unique challenges of your Hyperion environment.

At its foundation, Datavail's software was built to support both business and IT users. The platform understands the relationships between different types of performance data and offers services that are leveraged by business and technical applications built on top. The services include standardized reporting, extensible alerting, robust security, industry standard communication, and multiple user interfaces.

Manage Oracle Hyperion with Confidence

Our Clients

We empower our EPM clients to operate at the most efficient level allowing them to focus more on their business and less on managing their infrastructure. By taking a comprehensive approach to APM, our clients benefit from the full cycle of product tuning, monitoring, issue resolution, optimization, and user simulations. All these benefits work together to provide greater value than point solutions.

"Every time I open the Health Analysis screen, it saves me hours of manual detective work."

Broker Information Services Company

"We replaced HPOV, OEM, Microsoft SCOM and several in-house tools with Datavail."

Fortune 100 Company

"For the rest of IT, we standardized on Tivoli. For Hyperion, we standardized on Datavail."

Fortune 100 Technology Company

Products Overview

Management

- Product and IT configuration management in one place
- Lessens expertise needed for system management
- Compare properties and settings across servers and environments

Automation

- Streamline business and IT processes across products and servers
- Out-of-the-box automation blocks for multiple products and common activities
- Chain tasks together to form flows that can run across servers in sequence

Auditing

Automatic versioning of:

- Product configuration
- Infrastructure
- Application elements

Log Management

- Dynamic management of all product and system logs
- Visualization of root cause analysis process

Performance Monitoring

- Infrastructure, network, and application-level monitoring
- Detailed product-specific hooks
- Monitoring for hard and soft failures allows for true proactive alerting

User Experience Monitoring (UX)

- Measurement and management of end user experience

Performance Testing Suite

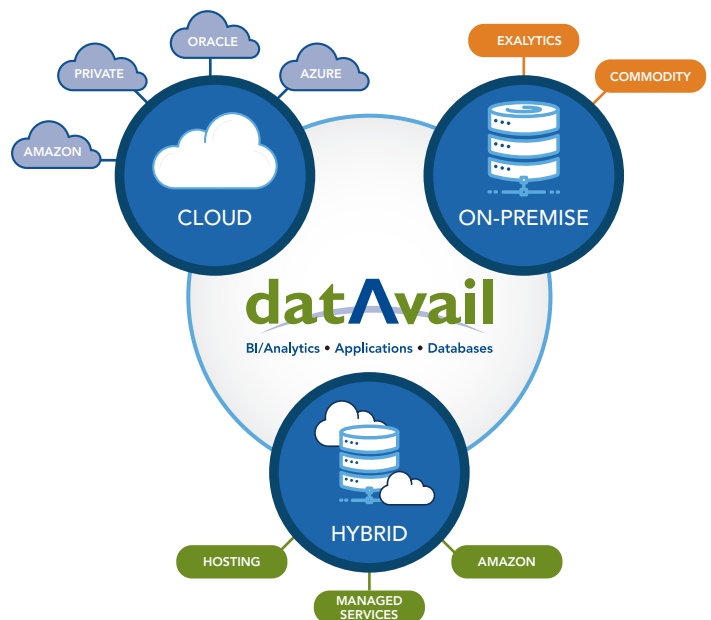

- Replay actual user activity in new environment
- Easy, efficient, and cost-effective
- Automated reports

Support Desk

- Integrated Help Desk that automatically gathers critical RCA information
- Seamlessly integrates with and augments existing help desk solutions

Optimization

- Hyperion Essbase and Hyperion Financial Management specific
- Pinpoint bottlenecks quickly in what would normally take multiple weeks
