

Accelatis Ascension Suite™

"Accelatis is the most effective software we've implemented to improve our Oracle Hyperion Performance."

"Addressing issues before they affect our users makes all of our lives easier. Accelatis makes it possible to do this consistently and easily."

LOCOMOTIVE MANUFACTURER

On the Right Track to Manage Oracle Hyperion Performance

ORACLE HYPERION PRODUCTS:

HFM, Essbase, FDM and associated products – SmartView, Financial Reporting, Interactive Reporting, etc.

BENEFITS ENJOYED FROM ACCELATIS:

- Speed up SOX Audit Reporting
- Understand User Activities
- Receive Alerts on Error Conditions
- Monitor All Services in their Environment
- Improve User Uptime and Performance

BENEFIT DETAILS:

- **Rapid Sox Audit Reporting** – Customer went from spending one week each quarter trying to document all changes to metadata, security, reports and identify who made them to simply running the Audit Change Report in Accelatis, thereby producing everything that's needed – down to the character level on each line of each report.
- **Actionable Essbase Usage Analysis** – The BI team collects information from Accelatis regarding which Financial Reports and Interactive Reports are being viewed, by whom and how long they are taking to open. This is being used to understand which Essbase applications are being used the most and allows the team to customize more relevant and useful applications for their users in order to increase both adoption and their return on investment in Essbase.
- **Timely Alerts on Service** – When services go down, the responsible parties are alerted immediately and can restart them before it impacts the user community. This has improved uptime and user satisfaction.
